## 4. Head Box Sizes

- Same as largest
- As per each order line

## 5. Handle Length Calculation Method

*See notes below for further explanation*

- Handle Adjustment
- Fixing Height

## 6. Any Additional Information

## Handle Length Calculation Notes

**Two ways to calculate handle length for gear operated controls****Specify Handle Adjustment Values**

Handle adjustments are applied to the default handle length: Blind Drop - 10 mm. For example — the default handle length for a blind with a drop of 1200 mm will be 1190 mm. A handle adjustment of 100 mm would increase the handle length to 1290 mm. A handle adjustment of -100 mm would decrease the handle length to 1090 mm.

**Specify Fixing Heights**

Handle lengths will be calculated by subtracting 1,100 mm from the Fixing Height entered for each line.
